An innovative solution for Adult Learning Centers (Voksenopplæring) and Municipalities.

synaply.me

Synaply. Long-term memory neuro-algorithms for 100% student success.

An EdTech platform powered by cognitive science and AI to transform language schools.

We automate the physiology of memorization, allowing your teachers to dedicate 100% of lesson time to live communication.

NotebookLM

Customer Pain Points: Integration Barriers

We have identified key barriers in teaching adult migrants who have urgently relocated to a new country:

Colossal Pace Gap

Groups consist of students with vastly different backgrounds. Struggling students physically cannot keep up, lose motivation, and attend the course with zero results.

Hidden Time Losses

Teachers spend up to 40% of in-person time on grueling attempts to explain new vocabulary vocabulary and grammar in a language students do not yet understand.

The “Norwegian in Norwegian” Trap

At the initial stage, this creates a wall of rejection and high stress for beginners.

Risk of Welfare Dependency

If a student fails to master the basics, they cannot find a job. After the program ends, the municipality is forced to support them on social welfare for years.

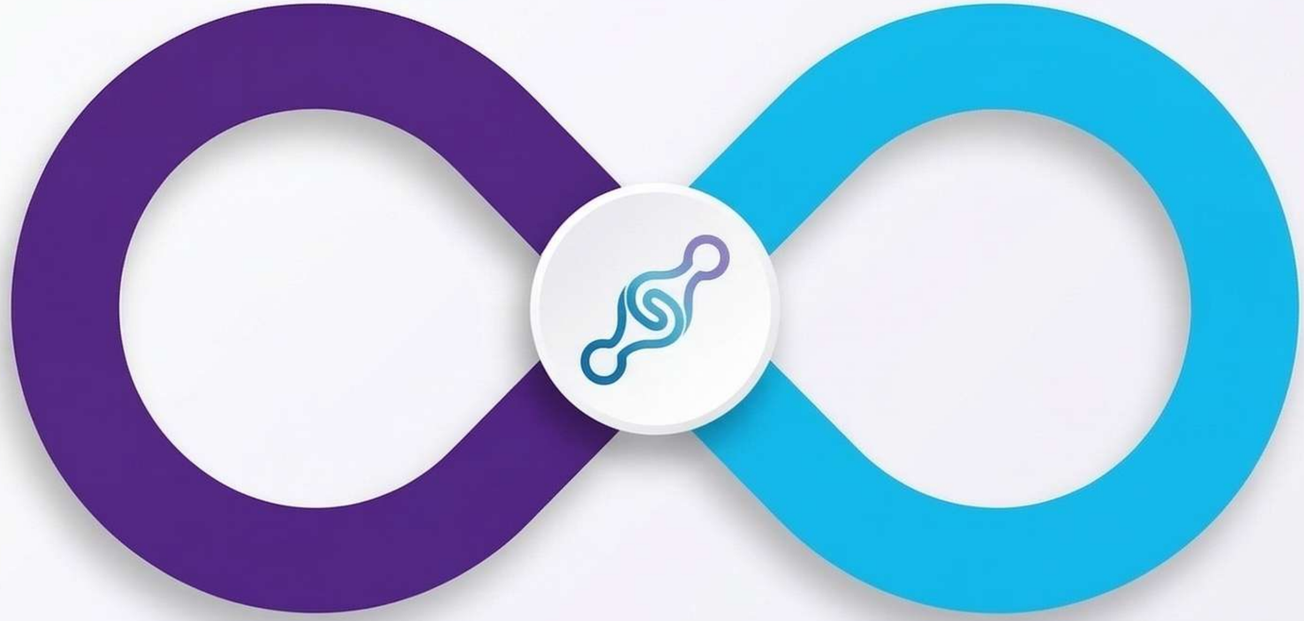
NoteBookLM

The Solution: Two-Phase Model (Flipped Classroom)

Synaply is not a replacement for the teacher, but a smart assistant that makes the learning process continuous.

Phase 1: Independent Practice (Self-Study)

- Students autonomously train vocabulary and basics—whether during dedicated self-study hours at school or on their own time.
- Spaced-repetition algorithms build knowledge to the point of automation without stress.



Phase 2: In Class (With the Teacher)

- Students arrive prepared.
- The teacher spends zero time translating words and uses 100% of the lesson for active dialogue and language practice.

NotebookLM

Seamless Integration and AI Customization

Zero disruption to established processes.
Implementation in just 1 day.

Supporting the Classics

Synaply's algorithms perfectly complement the structure of popular textbooks (På vei, God i norsk, etc.).

1-Click AI Generation

Teachers can create custom lessons from any text, news article, or professional manual in seconds.

Vocational Dictionaries

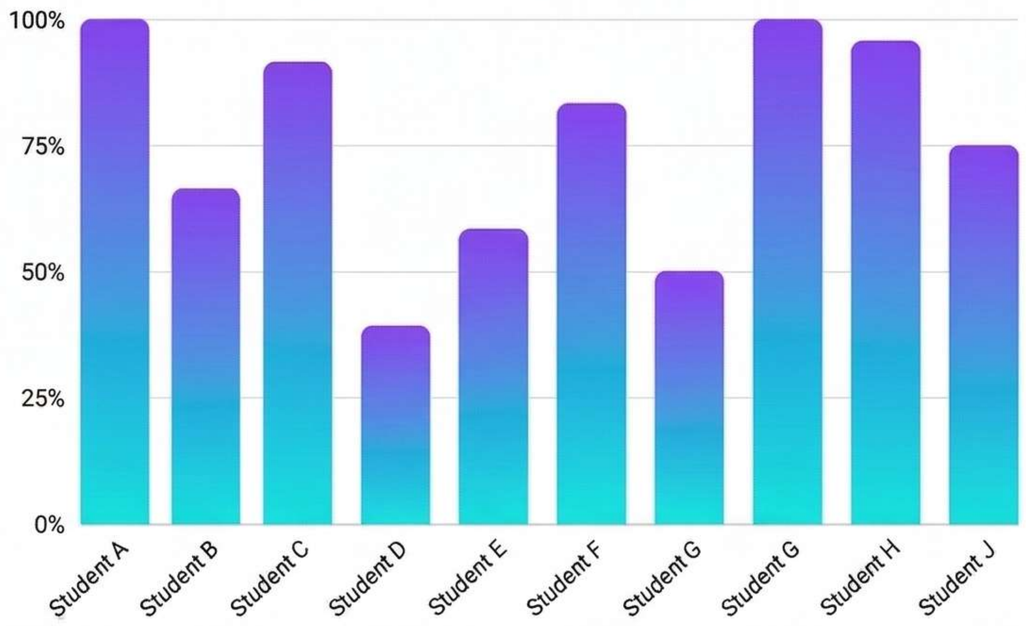
Instant creation of specialized vocabularies (for builders, medics, cleaners) — focusing on the fastest possible employment.

NotebookLM

Teacher Dashboard: Predictive Analytics

Moving from ‘blind’ teaching to data-driven management.

Engagement Monitoring



Teachers see each student’s progress in real-time.

Preventive Action

- Low Engagement: Topic X
- Assessment Needed: Module Y
- Low Engagement: Topic Y

The dashboard highlights topics where the class is ‘stuck’ in advance. The teacher knows exactly what to focus on in class.

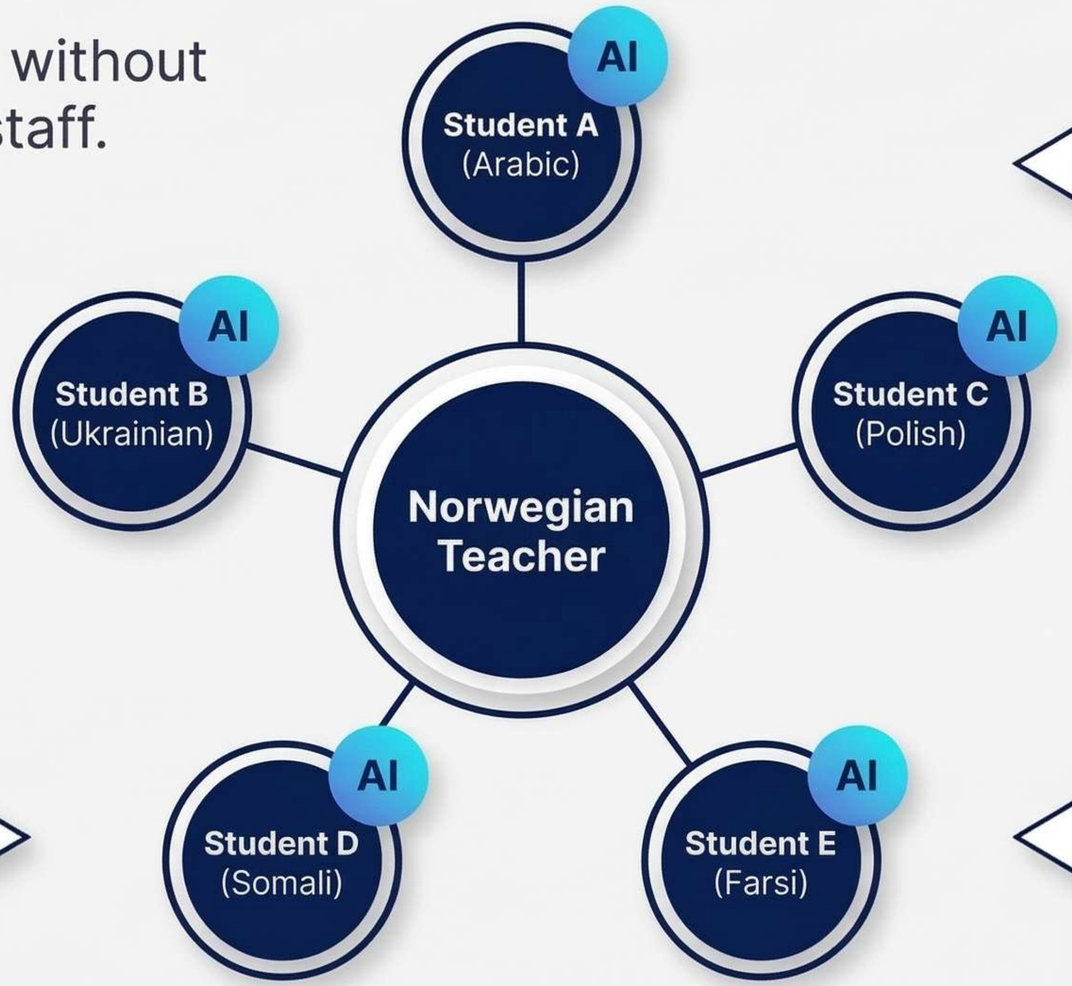
Objective Assessment

Transparent statistics on student effort outside the classroom.

NotebookLM

Inclusivity: Breaking the Language Barrier

A personalized approach without expanding the teaching staff.



Multilingual Classrooms

A single Norwegian teacher can now effectively lead a group speaking 10 different languages simultaneously.

AI Tutor in Your Pocket

Explains complex rules in the student's native language (Ukrainian, Arabic, Polish, etc.).

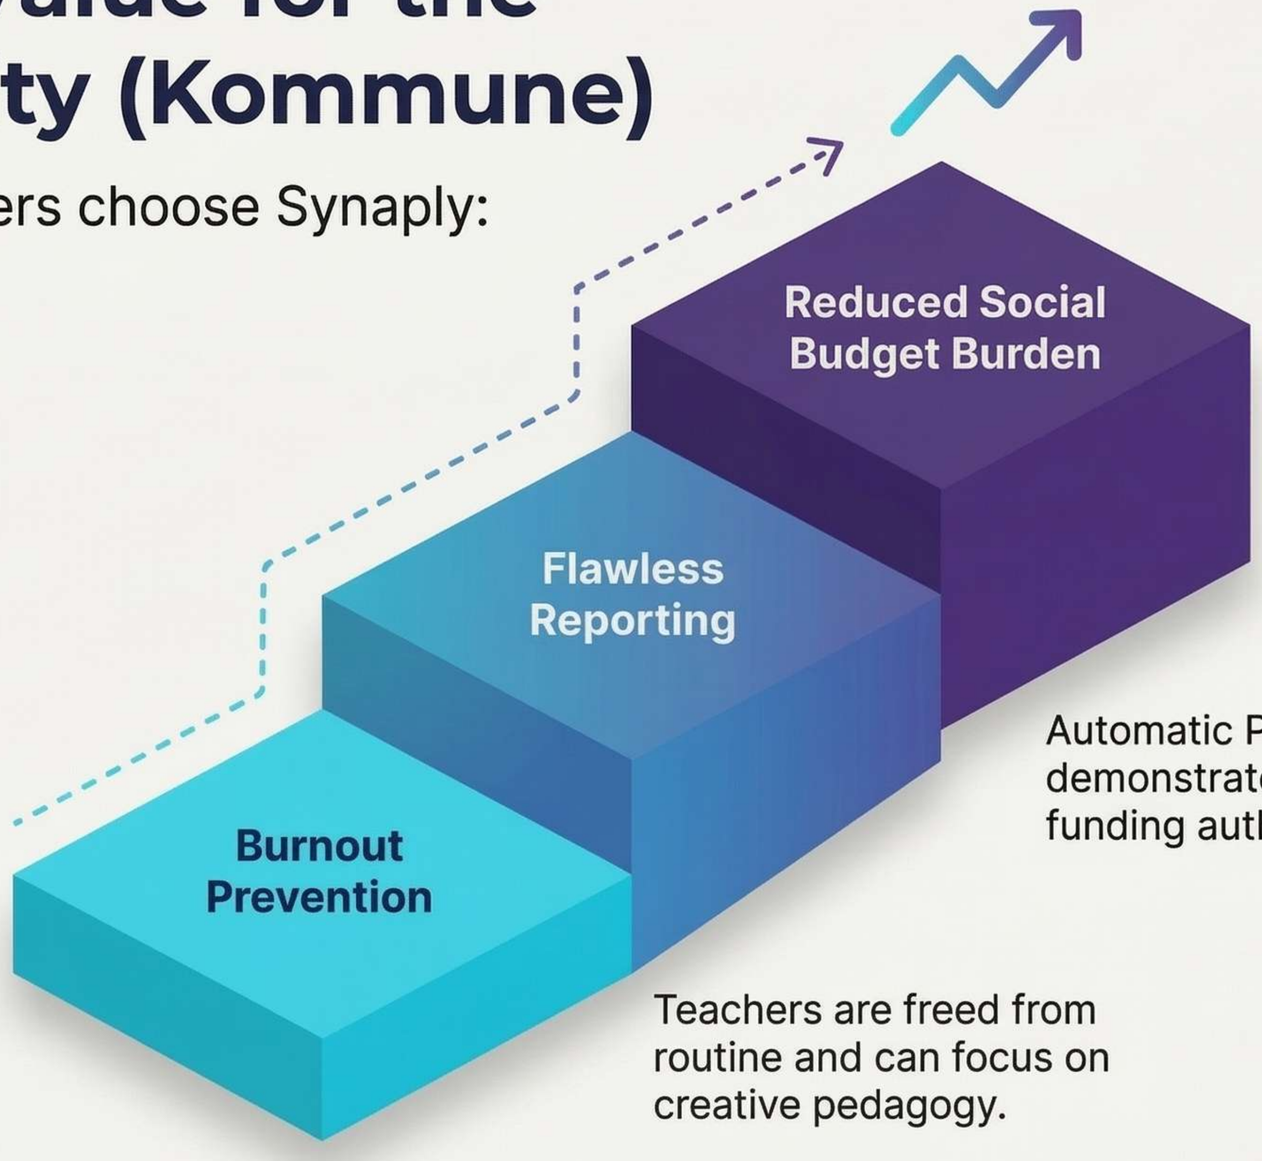
Adaptive Pace

The system adjusts to everyone's speed, preventing high-achievers from getting bored and struggling students from giving up.

NotebookLM

Strategic Value for the Municipality (Kommune)

Why decision-makers choose Synaply:



Every month of accelerated integration saves the municipality tens of thousands of krones in welfare benefits.

Automatic PDF reports demonstrate results to the funding authorities.

Teachers are freed from routine and can focus on creative pedagogy.

NotebookLM

Unit Economics: ROI for the Municipality

Synaply is not an expense, but an investment in budget protection.
(Subscription Cost: 299 NOK / month or ~3,600 NOK/year per student).

The Traditional Path (Risks)	The Synaply Path (Results)
Failed Integration = Investment in training (~60,000 NOK) wasted.	0 NOK wasted on mechanical translation during lessons.
Long-term Welfare Dependency = Minimum 237,000 NOK per year (2G) to support one unemployed individual.	Guaranteed mastery of basics and faster entry into the labor market (transitioning from 'benefit recipient' to 'taxpayer').

Successful integration and removal from welfare for **just 1 student** fully covers the annual Synaply license for **65** students.

Pilot Project Launch

Start using the technology of the future today.

1

Free Pilot

We are offering a 1-month trial for 1–2 classes in your school.

2

Fast Start

A 30-minute online onboarding for teachers.

3

Results Analysis

After 30 days, we will compare the engagement and performance of the pilot group with others.
